

MultiSystem II

Greatness becomes greater

Improving upon an industry leading product is a daunting task but we at Solid State find ourselves in this quandary from time to time.

MultiSystem II is a generational leap bringing our legendary reliability to a new product.

Building upon the secure MultiSystem foundation and listening to our customers, we've incorporated new features that make an already great system greater.

- *Unparalleled Speed*
- *Compatible with existing systems*
- *User programmable*
- *Easy to use layout software*
- *CAT5, Wireless and fiber connection*
- *Built in diagnostics*
- *Internet connectivity*

New technologies to give you the builder greater freedom and more power but without having to change the way you work.

MultiSystem II features new technologies such as wireless control from iPhone and the ability to receive program updates for the system over your cellphone, allowing you to keep voicing while we make the last minute changes for you.

Rather than blind you with science, we'll just help you build brilliant organs.

MultiSystem II in focus

Modular Systems

Instead of a one board does everything approach we focus on producing modules that do certain dedicated functions with excellence. The MSII processor is a thoroughbred switching relay, it only knows how to do one thing and it does it to perfection. If you need an integrated capture system simply add another dedicated module such as our new M3 capture processor.

Recording

MultiSystem remembers what you play and simple play and record pistons can be added to the console. Add an additional recorder module for native high speed record and file management including export to MIDI and iPhone/iPod.

MIDI

Although MultiSystem operates at speeds vastly higher than MIDI it can happily output MIDI to the chamber for chimes or carillon and can talk MIDI at the console for electronic keyboard compatibility. In fact the built in translation to MultiSystem will transmit MIDI data over 300 feet.

Data Connections

MultiSystem II uses standard Ethernet cables and equipment, we can connect via the internet to our offices for diagnostic information and to assist you on site. It is also possible to plug in a computer and talk to the system directly.

Updates

Stuck on the road and need to change the system layout? We offer many choices to suit your needs.

SD Card: The system has a removable SD card which contains the programming. We can ship you a new one, or download a new file and save it on the card.

Software: Use our layout software to make your own changes.

iPhone: Download the changes and wirelessly upload them to the system.

Compatibility: The new system will run the same layout as a 17 year old MultiSystem so no worries about compatibility.
